

PASUBIO
RE-NOVA

RE-NOVA:

new project for recycled leather fibers

What is it?

Up to 55% of recycled leather fibers on a polyester core.

What are the production steps?

Semifinished leather fibers are deposited on a canvas of polyester to confer mechanical characteristics;
Finishing with coating line.

Where is it possible to apply inside the car?

Soft trimmed components as steering wheel (SW) or seats.

Status of development:

Trial developed in laboratory to test the behaviour of recycled support with the coating. Recipe developed for SW;
